3- The man said that he was exercising because he wanted to keep his body in good health.

4- The woman is too old that's why her organism produces very little insulin.

### Writing (5pts)

The food we eat plays an important role in the maintenance of our health and shape. In fact, to function well, our body needs/requires different essential substances, called nutrients to produce its sugars, enzymes, hormones or other substances but when there is absence or lack of any of those nutrients we get from our meals (every day foods), the organism doesn't function any longer well, when we become ill. So, to avoid being ill / to be healthy people must have a balanced diet which respects the presence of elements from all the different food groups: proteins, oil and fats, carbohydrate, vitamins, minerals and water. Each nutrient has a precise role to play in the body. When our diet / nutrition / feeding / nourishment is balanced, we don't suffer from any disease. It's the reason why our diet must include all food group items in normal quantity and quality. To avoid diseases caused by malnutrition, we must avoid undernourishment now. To be healthy and in perfect shape, apart from diet, one must also pay great attention to factors like regular exercises or sports, good stress and work management, and the respect of hygiene rules are also key factors for keeping healthy and in shape.

CP: 2 dont 1pt à partir de la note de 12 sur 20

NB : donner la moitié des points à tout candidat ayant écrit les mots à l'item 4.
